                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents the capsular gene cluster of Streptococcus suis serotype 1. The genes in this cluster are involved in Streptococcus suis serotype 1. The genes in this cluster are involved in polysaccharide biosynchesis of capsular components and antigens. The proteins have glycosyltransferase activities (CpsIF, CpsIG, CpsII, CpsIJ, CpsIX) and CP polymerase activities (CpsIH). The capsule confers bacterium resistance to complement-mediated opsonophagocytosis. The gene cluster is used as a source of probes and primers for serotype-specific detection of S. suis and is also useful for recombinant production of the proteins. The proteins are then useful for producing antigens that can be used in vaccines, for controlling or eradicating a Streptococcal disease,
